Google Question

DIGITAL LITERACY

Form description

Name *

Short answer text

Which of the following is the most secure method for protecting your professional accounts (GitHub, LinkedIn, Kaggle)?

- Using the same complex password for all platforms.
- Enabling Multi-Factor Authentication (MFA) or Two-Factor Authentication (2FA).
- Changing your password every 30 days
- Hiding your username from public search results

You receive an email from "Support-GitHub" asking you to click a link to "verify your repository access" immediately. What is the first thing you should do?

- Click the link to ensure your code is safe
- Reply to the email asking for more details
- Check the sender's actual email address for inconsistencies or "phishing" signs

When building a professional online presence as an engineer, what is the primary purpose of a GitHub README file?

- To list your personal hobbies and interests.
- To introduce yourself, your branch (AI/ML), and explain the purpose of your technical projects.
- To store private passwords for your API keys
- To act as a social media chat wall for friends

Which of these is a core principle of "Email Etiquette" when contacting a professor or industry professional?

- Using a clear, descriptive subject line and a professional greeting
- Sending the email without a subject line to save time
- Using informal slang like "Hey" or "Wassup
- Expecting an immediate reply within 5 minutes

Name one specific AI or Data Science tool mentioned in our digital literacy guide and describe how you plan to use it this semester

Name one specific AI or Data Science tool mentioned in our digital literacy guide and describe how you plan to use it this semester

5 responses

One specific tool mentioned in the digital literacy guide is GitHub. This semester, I plan to use GitHub to host and manage all my coding projects for my AI and Data Science coursework. Instead of keeping my assignments and personal projects only on my local computer, I will upload them to repositories on GitHub, which will allow me to track changes to my code over time using version control. I will also use GitHub to collaborate with my batchmates on group projects by sharing repositories, reviewing each other's code, and merging our contributions without conflicts. Additionally, I plan to make my best projects public so that I can include the links on my resume and LinkedIn profile, giving potential employers and internship recruiters a clear, working example of my skills. By building a strong GitHub presence this semester, I will be better prepared for technical interviews and real-world software development environments.

One important tool is Kaggle. I plan to use Kaggle this semester to practice machine learning by working on real datasets, participating in competitions, and improving my skills in Python libraries like NumPy and Pandas. It will also help me build a strong portfolio for future internships.

I plan to use Kaggle this semester. As an engineering student focusing on traffic flow optimization for my BYOP project, I will use Kaggle to find relevant datasets and explore existing machine learning notebooks to help structure my own AI model.
